My Swedish Girlfriend MUCKING FORK

SVERIGEGREPEN

SverigeGrepen™ is a patented mucking fork, designed and manufactured in Sweden.

Ergonomic design specially designed ergonomic fork head ensures that the fork moves forward easily in the most efficient direction, increasing work output. The handle is designed to offer four different grip options. This increases comfort and extra wear and tear on the body. The handle stabilizes the fork and reduces the load on the wrist and shoulder. The shaft, which is part of the unique design, is made of anodized aluminum. The ergonomic design allows a good working posture and decrease pressure on back.

HIGH QUALITY

The fork head and handle are made of specialized plastic, making this one of the lightest mucking forks on the market and extremely durable. Total weight is very low. The Swedish Fork is developed and manufactured in Sweden. It is adapted to Sweden's extreme weather conditions, withstanding both heat and cold. Improve the quality of the tools you use in the stable!

EFFECTIVE

The fork head design reduces mucking time and minimizes unnecessary consumption of bedding. The contoured shape allows greater stability so that a larger amount of manure can be held in the fork head without it seeming too heavy. Manure is left in the fork head and the bedding falls through quickly. The long shaft is one of the main benefits of the fork. The extra length means the fork does the work instead of ones arms and back. The ergonomic work position unique design of handle, shaft and head works well for short and tall people.
